

Introducing the Professional Qualification

Information is the currency for enterprises in the 21st century. COBIT helps enterprises get the most value from this critical asset. COBIT is a comprehensive framework of globally accepted practices, analytical tools and models that can help any enterprise effectively address critical issues through governance and management of information and technology.

This COBIT® 5 Foundation course is an interactive, classroom-based learning experience. Participants learn about the need for an IT governance framework and how COBIT addresses this need by providing the latest insights into enterprise-wide governance of IT. This course explains the elements and supporting materials of the COBIT framework, using a logical and example-driven approach for anyone interested in obtaining COBIT foundation level knowledge. COBIT 5 Foundation is the first step, and a prerequisite, to enroll into the advanced level courses that ISACA has planned for release in 2013.

Language Options	<ul style="list-style-type: none"> • English 		
Delivery Method	<ul style="list-style-type: none"> • In-class 		

COBIT® Foundation

Program Outline

GOV-FND01	Overview
GOV-FND02	The COBIT 5 Principles
GOV-FND03	The COBIT 5 Enablers
GOV-FND04	Introduction to COBIT 5 Implementation
GOV-FND05	Process Capability Assessment Model

What is COBIT?

COBIT 5 provides the next generation of ISACA's guidance on the enterprise governance and management of IT. It builds on more than 15 years of practical usage and application of COBIT by many enterprises and users from business, IT, risk, security and assurance communities. Today, more than ever, information and related technologies need to be governed, managed and operated in a holistic manner—with a single, integrated process model that provides end-to-end coverage of the roles, responsibilities and practices required.

COBIT 5 provides a comprehensive framework that assists enterprises in achieving their objectives for the governance and management of enterprise IT. It helps enterprises create optimal value from IT by maintaining a balance between realizing benefits and optimizing risk levels and resource use. COBIT 5 enables IT to be governed and managed in a holistic manner for the entire enterprise, taking in both the full end-to-end business and IT functional areas of responsibility, while considering the IT-related interests of internal and external stakeholders. COBIT 5 is generic, and is useful for enterprises of all sizes; whether commercial, not-for-profit or in the public sector.
